welcome to the new Merck

We have made it different

The new Merck brand embodies our vibrant global business that makes a meaningful difference in the world. It reflects how we have transformed over the last decade into a global science and technology company that makes a meaningful difference.

Our new look and feel is inspired by the forms and colours seen under the microscope. It captures the essence of our work: making people's lives richer through detail and discovery.

Our appearance is a bright step into the future for our business, but our focus on product quality and customer care is unchanged. We will continue to deliver the very best for our customers and partners around the world.

The name's Merck...

We are now simply Merck across all businesses. Merck Serono and Merck Millipore will appear as Merck in the future.

The only exceptions are in the USA and Canada. Here EMD Serono and EMD Performance Materials will retain their current names. Our life science business EMD Millipore will be renamed as Millipore Sigma

Although we operate under different business names, all our businesses are united by a common purpose: to advance technologies for life. We aim to co-create a better world with our customers, patients and partners.

We are Merck

We live in a world of possibility

A world where exploration and discovery are celebrated. Our meticulous and research-driven businesses deliver diverse, high quality products that enrich lives and enable us to share business success with our customers.

Set up in Darmstadt, Germany, in 1668 by Friedrich Jacob Merck, we are the world's oldest pharmaceutical and chemical company. Over the course of 350 years we have become a truly global company. Our 40,000 people span 66 countries and are united by their passion for new ideas, the possibilities of technology, and the potential to make a difference in the world.

a pioneering company that advances technologies for life

Across healthcare, life science and performance materials, we bring specialist and high quality products to the world.

Healthcare

From groundbreaking prescription medicines that treat conditions such as cancer and infertility to over-the-counter products for colds and pain, our work makes a difference to millions of lives around the world.

Life Science

Providing scientists and engineers with best-in-class technologies, lab materials and services we are dedicated to making research and biotech production simpler, faster and more successful.

Performance Materials

Developing specialty chemicals for particularly demanding applications, we provide groundbreaking liquid crystals for displays, effect pigments for coatings and color cosmetics, as well as high-tech materials for the electronics industry.

Taking science further

Our solutions enable scientists to spend more time advancing the promise of science; our technologies detect the previously undetectable; and our products make it possible to monitor live cells in intricate detail. In effect, we empower science.

Our products make cutting-edge research possible. We develop solutions that make lab work quicker, easier and cost-effective.

Our customers expect our products to set the benchmark in quality and efficiency. Merck is synonymous with precision and purity and our Milli-Q® water purification systems reflect this, providing exceptional filtration technology for the lab.

Similarly, our Chromolith® columns for high performance liquid chromatography support a more efficient process by simplifying and speeding up the analysis of complex samples. The use of a high-purity silica gel saves time by cutting out the need for sample preparation enabling researchers to generate results typically four times faster than with standard particle columns.

Reaching new Heights

Our customers can rely on us to help them to meet the highest quality standards. Our products help pharmaceutical and biotech companies to develop and manufacture drugs safely, effectively and cost efficiently.

Merck & sigma-Aldrich

This combination is built on complementary strengths, which will enable us to serve you even better as one organization than either company could alone. This means providing a broader portfolio with a catalog of more than 300,000 products, including many of the most respected brands in the industry, greater geographic reach, and an unmatched combination of industry-leading capabilities.

Grades of purity

Reagents and chemicals from Merck have been the hallmark of quality for several years. State-of-the-art analytical laboratories exercise stringent control over the maintenance of guarantees and specifications according to international standards within the scope of relevant legal requirements and our own test procedures. Sophisticated instrumental and wet-chemical procedures are constantly adapted to technical and method developments. Reagents and chemicals tested in this way are available in various grades for use in research and industry.

EMSURE® for analysis ACS, ISO, Reag. Ph Eur
Premium grade for all regulated and highly demanding lab applications. Best and most extensive product specifications.

EMPARTA® for analysis ACS
The right grade for your analytical lab applications. Specifications according to the ACS.

EMPLURA®
Suitable for preparative lab applications and cleaning purposes. Specifications with the most important parameters. Also available in bulk packs.

LiChrosolv®
HPLC solvents with guaranteed UV-transmittance and high purity, filtered through 0.2 micron filter.

Uvasol®
Solvents of high optical purity for ultraviolet, infrared spectroscopy. The certificate of guarantee includes minimum transmittance at certain defined wavelengths in UV range and/or for suitability testing.

Suprapur®
Suprapur® reagents, primarily acids, bases and salts are products of higher purity designed for trace analysis. The values given on the comprehensive specification are in ppb concentrations and are frequently limited by the detection levels used routinely in analytical procedures.

For synthesis
These are used in all areas of preparative organic chemistry. Their purity is stated in the form of products specifications - a general indication of their standardized quality.

Pure/Purified/Extra Pure
Ideally suited for analytical chemistry and also suitable for technical production applications.

GR (Guaranteed Reagents)
Guaranteed reagents are used in the common analytical applications. Certificate of Guarantee gives the minimum assay and the maximum limit of trace impurities.

Cell Test

Measuring range: 25 - 1500 mg/I COD

Carefully pipette 3.0 ml of the sample into a reaction cell, close tightly with the screw cap, and mix vigorously. **Caution, the cell becomes very hot!**

Heat the reaction cell in the thermoreactor at 148°C for 2 hours.

Swirl the cell after 10 minutes.

Replace the cell in the rack for complete cooling to room temperature. **(Very important!)**

Place the cell into the cell compartment align the mark on the cell with that on the photometer.

Durapore (PVDF)

These are Polyvinylidene fluoride membranes with a very low protein binding capacity, making it ideal for biological solutions filtration for high protein recovery. They have a broad chemical compatibility and are available in both hydrophilic and hydrophobic forms. Major applications include sterilizing filtration of antibiotics, biological, DNA solutions, cell harvesting/washing, clarification of aqueous HPLC samples, sterility testing etc.,

SmartFlare™ RNA Detection Probes: Principles, protocols and troubleshooting

Principles of SmartFlare™ technology

RNA detection traditionally requires transfection, laborious sample prep, RNA amplification and/or detection based on standard curves. In contrast, SmartFlare™ RNA Detection Probes are endocytosed by live cells using existing cellular endocytosis machinery. Sample prep is unnecessary; simply add SmartFlare™ Probes to your cultures, incubate overnight and detect the next day. Over time, the probes exit the cell, without adverse effects, allowing for subsequent downstream assays.

Each SmartFlare™ probe consists of a gold nanoparticle conjugated to multiple copies of a double-stranded oligonucleotide, in which one strand (the "reporter strand") bears a fluorophore that is quenched by its proximity to the gold core (Figure 1). When the nanoparticle comes into contact with its target RNA, the target RNA binds to its complementary "capture" strand and displaces the reporter strand. The reporter strand, whose fluorophore is now unquenched, fluoresces and can be detected using any fluorescence detection platform.

Experimental controls

A. Target Probe

Figure 1.

SmartFlare™ Control:

A. Example of typical target probe

B. Uptake Control or positive control probe that is always "on" inside the cell

C. Scramble Control or negative control that does not recognize any sequence within that cell

D. Housekeeping Probe that can be used as a positive control recognizing sequences known to express at high levels within the cell

Fluorescence detection parameters

To detect SmartFlare™ signals in treated cells, use a fluorescence detection platform that excites the specific conjugated fluorophore(s) at the wavelength of maximum excitation (excitation (nM) in Table 2) and that is set up to acquire signals at the wavelength of maximum emission (emission (nM) in Table 2).

Physical properties of Fluorophores

CY5	650	670	Red2	Red	CY5 compatible filter
CY3	550	570	Yellow	Green	CY3 compatible filter

Dehydrated Culture Media & Biological Raw Material

Gold Standard in Microbiology

Traditional culturing is proven "Gold Standard" practice in microbiology. Even though many rapid technologies have emerged leading to time reduction and higher sensitivities but the final confirmation is based on traditional culture based tools. This reliance calls for high quality and consistent performance of culture media. We make it happen through highly controlled and coordinated approach in vendor selection, raw material selection & testing, processing, product development and ensuring traceability for every action.

Worldwide, granulated media are still considered as best culture media for its quality and consistent performance. Your appreciation and acknowledgment lead us to extend our commitment to provide this international quality at competitive prices. With this determination, Merck invested in Goa production facility and started manufacturing of "Dehydrated Culture Media & Base Materials".

Today, we produce more than 160 products. These products are produced and tested according to harmonized methods of USP/EP/JP, IP, FDA-BAM, ISO, BIS and other regulatory guidelines and also comply with recommendations suggested in ISO 11133. Product range confirms to applications performed in pharmaceutical, food, beverages, academic and Institutional laboratories.

Your benefits

- No false positives and false negatives
- Flexible option for alternate vendor qualifications

Harmonized Methods of Microbial Limit Testing

The goal of global pharmacopoeia harmonisation is to promote consistency of microbiology methods used by companies throughout the world.
USP chapter <1196> and EP chapter <5.8> contains detailed descriptions of chapters affected by harmonization while USP (Version 34) chapters <61> & <62> and EP (Version 7.6) chapters 2.6.1, 2.6.12, 2.6.13 indicate in detail the changes in methods for microbial enumeration tests and tests for specified microorganisms. Among other modifications, the harmonized methods provide much more detail in terms of demonstrating method suitability (method validation) and media-growth promotion. As a reliable partner for pharmaceutical companies, Merck supports its customers in meeting the new requirements of the harmonized pharmacopoeia: Merck is able to provide you a comprehensive product portfolio of qualified Dehydrated Culture Media for microbiological control of pharmaceutical products in powdered and granulated forms.

Your benefits

- Global acceptance
- Complete audit safety & security
- Pack size flexibility
- Granulated & powdered options

ultrapure water - Type 1

from tap to pure & ultrapure water

Milli - Q® Integral

Milli-Q® Integral Water Purification Systems : Integrated pure and ultrapure water at your fingertips. The Milli-Q® Integral is the most advanced ultrapure water purification system in the Merck portfolio. Producing from a few liters to a few hundred liters per day, this "2-in-1" system covers the needs of both pure and ultrapure water from tap water. Milli-Q® Integral is a unique product combining the most advanced technologies, such as RO, patented Elix® EDI technology, UV, TOC monitoring, polishing cartridges and more.

Milli - Q® Direct

Milli-Q® Direct Water Purification Systems : Pure and ultrapure water directly from tap water The Milli-Q® Direct system is designed for ultrapure (Type 1) water needs up to 200 l/day and pure (Type 3) water needs up to 350 l/day. From pure water, the Milli-Q® Direct system produces ultrapure water adapted to your specific applications and exceeding the requirements of the most demanding norms. Users benefit from manual and volumetric water dispense at low and high flow rate.

Direct - Q®

Direct-Q® Water Purification Systems : Tap to pure and ultrapure water – with easy and convenient dispense! Direct-Q® systems deliver both pure and ultrapure water directly from tap for use with a wide variety of applications in the lab. System is designed for under bench-, bench- or wall-mounting. Systems are available with either a remote or integrated water dispenser. A built-in 185/254 nm UV lamp reduces the levels of organics for critical applications, and also destroys bacteria. With the appropriate Application Pak, specific contaminants such as bacteria, particulates, pyrogens, nucleases, endocrine disruptors or volatile organic compounds are removed.

Super - Q®

Super-Q® Water Purification System : Reagent-grade water purification system producing up to 12 l/min of Type 1 ultrapure water The Super-Q® System is a high-flow water system designed to provide the "final polish" to water that has been pretreated by reverse osmosis, distillation or deionization. Super-Q® systems consistently produce ultrapure water quality that exceeds Type 1 ASTM®/CAP/CLSI® specifications.

Milli - Q® Advantage

Milli-Q® Advantage A10® Water Purification System was designed to deliver ultrapure water adapted to every user's needs. Using an existing source of pure water as feed, the Milli-Q® Advantage A10® system delivers high-quality ultrapure water (resistivity: 18.2 MΩ·cm @ 25 °C; TOC 5 ppb). Two separate components – the Milli-Q water production unit and the Q-POD® ultrapure water delivery unit – provide an ultrapure water solution adapted to today's laboratory environments.

Milli - Q® Reference

Milli-Q® Reference Water Purification Systems : The reference for ultrapure water systems. The Milli-Q® Reference system delivers ultrapure (Type 1) water customized to fit a broad range of research areas, making ultrapure water conveniently available in any laboratory, regardless of space limitations or the stringency of regulatory norms. Water is purified in a first step to reach a resistivity of 18.2 MΩcm at 25 °C and a TOC value below 5 ppb. This water is sent through a small recirculation loop to the Application Pak, where a final purification step removes contaminants critical for specific experiments, just before water leaves the system.

Synergy®

Synergy® Water Purification Systems : Ultrapure water at the point of use – with easy and convenient dispense! The Synergy® systems are designed for ultrapure (Type 1) water needs up to 100 l/day for laboratories that already have access to purified water and need a point-of-use system to supply high quality ultrapure water at more than 1.5 l/minute. The systems' compact design, along with the versatile remote dispenser, ensures easy installation anywhere in your laboratory, either on the bench or wall-mounted.

Simplicity®

Simplicity® Water Purification Systems : Ultrapure water on demand wherever you need it! The Simplicity® system is designed to produce ultrapure (Type 1) water from pure water for users who need up to 5 l/day, thus economically replacing ultrapure bottled water. A portable, personal ultrapure water purification system, the Simplicity® can be located anywhere in your laboratory. It requires no special installation, no feed water connection and produces ultrapure water on demand from pretreated water. An intuitive color graphic display shows key system parameters at a glance, enabling easy water quality and maintenance warning monitoring.

pure water - type 2

From tap to pure water

Elix® Large

Merck has developed Elix® systems for users requiring a few 100 l per day up to several thousand liters per day of analytical-grade water. The system can be connected to additional components and accessories in order to build a comprehensive water purification system, designed and tailored to specific customer needs. Analytical-grade water meets the specifications for Type II water defined by CAP, ISO® 3696 / BS 3997 and CLSI® and for Purified Water defined by the European and U.S. Pharmacopoeia.

Elix® Advantage

Elix® Advantage Water Purification Systems : The Elix® Advantage system is the first choice of scientists around the world for producing Type 2 pure water in both validated and non-validated environments. Equipped with the second generation of patented Elix® EDI technology, the Elix® Advantage system produces consistently high-quality pure water at low and predictable running costs.
